Side effects	NONE!	<ul style="list-style-type: none"> • Stomach pains • Irregular heartbeat • Tremors • Fainting • Problems breathing • Convulsions • Confusion • Hallucinations • Restlessness • Aggression • Nausea • Diarrhoea

What is Zotrim?

Zotrim is a unique food supplement **scientifically proven to aid weight loss**, using a mixture of **natural ingredients**, independently proven through various medical research. Zotrim has a dual mode of action, which addresses both sides of the 'eat-less calories', and the 'burnoff - more calories' equation:

Eat less calories:

Zotrim helps you to:

- feel full sooner during a meal so that you tend to consume less at a meal
- feel satisfied after a meal so that you tend to snack less

[More about Zotrim...](#)

Burn more calories:

Zotrim contains natural plant extracts from guarana and yerba maté, which are mild stimulants and invigorators having a caffeine-like effect.

As a result, Zotrim:

- can help us to be generally more active
- 'burn off' more calories than we would otherwise do

What is Adipex?

Recognised across the US and UK as being a stimulant, **Adipex diet pills** work to:

- Suppress your appetite
- Reduce your calorie consumption

By stimulating selected nerve bundles in the central nervous system, Adipex makes your brain believe that your body has been put under extreme stress and is currently in a state of emergency. Through generating these intense reactions your brain suppresses your appetite - to enable you to deal with the moment - and allows users to lose weight.
