Side effects	NONE!	<ul style="list-style-type: none"> • dry mouth • insomnia • diarrhoea • high blood pressure • blurred vision • palpitations • psychosi • convulsions

What is Zotrim?

Zotrim is a unique food supplement **scientifically proven to aid weight loss**, using a mixture of **natural ingredients**, independently proven through various medical research. Zotrim has a dual mode of action, which addresses both sides of the 'eat-less calories', and the 'burnoff - more calories' equation:

Eat less calories:

Zotrim helps you to:

- feel full sooner during a meal so that you tend to consume less at a meal
- feel satisfied after a meal so that you tend to snack less

[More about Zotrim...](#)

Burn more calories:

Zotrim contains natural plant extracts from guarana and yerba maté, which are mild stimulants and invigorators having a caffeine-like effect.

As a result, Zotrim:

- can help us to be generally more active
- 'burn off' more calories than we would otherwise do

What is Duromine?

Recognised by leading health officials as being an appetite suppressant, Duromine's active ingredient phentermine works by:

- Making the brain believe users hunger levels are reduced.
- Breaking down stored fat, using the body's natural fat cells.

Available only to obese patients who have been prescribed Duromine by their physicians, Duromine can effectively help users who have struggled to lose weight in the past by offering them this initial helping hand.
