Price	\$1.48 per pill	Not Currently Sold
Documented loss	11lbs - 12lbs in 6 weeks	1lb - 2lbs per week
Side effects	NONE!	dizziness insomnia Nausea Diarrhoea Seizures Hyperthermia

What is Zotrim?

Zotrim is a unique food supplement **scientifically proven to aid weight loss**, using a mixture of **natural ingredients**, independently proven through various medical research. Zotrim has a dual mode of action, which addresses both sides of the 'eat-less calories', and the 'burnoff - more calories' equation:

Eat less calories:

Zotrim helps you to:

- feel full sooner during a meal so that you tend to consume less at a meal
- feel satisfied after a meal so that you tend to snack less

[More about Zotrim...](#)

Burn more calories:

Zotrim contains natural plant extracts from guarana and yerba maté, which are mild stimulants and invigorators having a caffeine-like effect.

As a result, Zotrim:

- can help us to be generally more active
- 'burn off' more calories than we would otherwise do

What is Ephedra?

Medically recognised as thermogenic stimulant, Ephedra pills react with the brain to:

- * increase your heart rate and metabolism
- * boost your energy levels

Through this reaction, the body naturally begins to burn the user's body fat in order to match the bodies demand for energy. Alongside its fat burning qualities, Ephedra is also used for a variety of other things: sports enhancement in athletes and the treatment of asthma and hay fever in sufferers.
