

Zotrim[®] natural weight-loss aid : An Overview

Zotrim is a unique 'over-the-counter' food supplement scientifically proven to be effective for

- Effective weight loss.
- Weight loss management over a long period.
- Eating less at meals and snacking less between meals.
- Increased metabolic rate.

In comparison to other weight loss approaches, Zotrim:

- Has evidence of efficacy lacking in other natural slimming supplements.
- Has similar efficacy to leading diet and weight loss programmes.
- Has similar or better efficacy than prescription drugs without having their undesirable side effects.

Zotrim has a dual mode of action:

- A 'Satiety Boost' that helps users to eat less through feeling fuller during a meal and for longer after a meal.
- An 'Energy Boost' that helps users to be more active and to burn more calories.

It therefore addresses both sides of the 'calorie balance'; less calories in and more calories out must lead to weight loss!

Zotrim is a convenient, easy to swallow tablet but the active ingredients in Zotrim are also available in a new soft drink called 'Slenderize' which aids fullness and contains only 35 kcals per 500ml bottle. A serving of Slenderize can be taken in place of one dose of Zotrim.
